

Music-On-Hold Audio Adapter

For use multi-line and KSU-less phones

MOH 500e™

Features

- **Works with virtually any phone**
Designed to work with virtually all single and multi-line analog phones and popular Non-KSU phone systems.
- **True "Hold Button" activation**
With a TEHMA on your phone and an MOH 500e connected to your phone lines, you can put any call, on any line, on-hold with music. Just press the hold button!
- **Everything that you need...just add your own music source!**
The MOH 500 comes complete with 2 TEHMAs and all the necessary cables to connect your adapter in minutes.
- **Simple installation**
Installs as easily as a telephone answering machine. Plug and play, then walk away! Everything that you need but the music source is in the box!
- **One for All**
One unit handles one to four incoming lines and 16 different phone extensions.

Music-on-hold for ordinary phones

Add on-hold audio capability to ordinary single or multi-line phones...for real! For years, what has been the "Holy Grail" of on-hold audio technology is now an affordable reality for any size business.

The MOH 500e works with virtually all single and multi-line phones, as well as the new, non-KSU, corded and cordless phone systems (cordless systems require use of a head set). Just one unit provides music-on-hold capability on one to four lines and up to 16 different phone extensions. All you need to do is add your own audio source like a CD player, an MP3 player or other type of digital on-hold audio player.

Specifications

- ◆ **Analog Phone Capability**
Adds true "hold button" on-hold audio activation to ordinary analog and KSU-less phones
- ◆ **Connectors**
Line interface: 4 RJ-11 phone jacks

- ◆ **Capacity**
1 to 4 analog lines
1 to 16 phone extensions
- ◆ **Power**
9VDC @300mA
Source 110VAC, 60Hz UL/CSA power pack
Physical
Size: 6.5" x 5.25" x 1.25" (LWD)
Weight: 2 lb

Introducing TEHMA

In order to achieve true "hold button" activation, we created a small module called a TEHMA (telephone extension hold music activator). This line-powered activator connects between the base of your phone and the handset cord and sends a signal down the phone line telling the MOH 500e unit whether or not the phone is on-hold. Only phone extensions with a TEHMA can put a call on-hold with the phone's hold button.

Phones without a TEHMA can put a call on-hold by pressing the star key twice and then pressing the phone's hold button.

The MOH 500e ships with 2 TEHMAs. Additional activators can be ordered from your reseller or from the On-Hold Plus on-line store.
